

Release Notes for Version 2.53.73 Hotfix

In the interest of ongoing product development and improvement, Bosch is proud to release software version 2.53.73 for the Solution 6000 Security Control Panel. This document briefly outlines the new features and improvements added in this release. Please read in conjunction with the current installation manual and other addendum's for more detailed information.

New Firmware Numbering				
2	.	53	.	73
Major		Minor		Patch

- ➔ Fixed an issue when using the Lock output on CP736B S/C Keypads.
- ➔ Fixed an issue when configuring a 2nd RF peripheral on existing enrolled SMART RF devices.
- ➔ Improvements made to LAN communications over CM430S links.
- ➔ Fixed an issue with RF112 Shock Sensor Walk Testing.

1) Lock output issue on CP736B keypads resolved

In previous versions, the onboard lock output and corresponding blue indicator LED would fail to operate as expected on the CP736B S/C keypads. This has now been corrected. Wi-Fi enabled keypads are not affected by this issue.

CP737B Wi-Fi enabled keypads are not affected by this issue, and the lock output and LED works normally.

2) Issue configuring 2nd peripheral on SMART RF devices

In previous versions, setting up a 2nd peripheral on an already enrolled SMART RF device would occasionally fail to configure the new peripheral. This has now been fixed.

3) Improvements to LAN communication over CM430S Links

This release includes improvements to the LAN communication over the CM430S LAN to Ethernet converter links, especially in situations where a large number of LAN modules are located on the link side.

4) RF112 SMART RF Shock Sensor Walk Testing

In previous versions, walk testing of the shock sensor peripheral on the RF112 reed switch did not function as intended. This has been resolved in this release.
